

# Alerton BACtalk Building Security

ALERTON®

*There's never been a greater need to protect your buildings, assets and employees than right now.*

# Protect, control and monitor the security of your facility

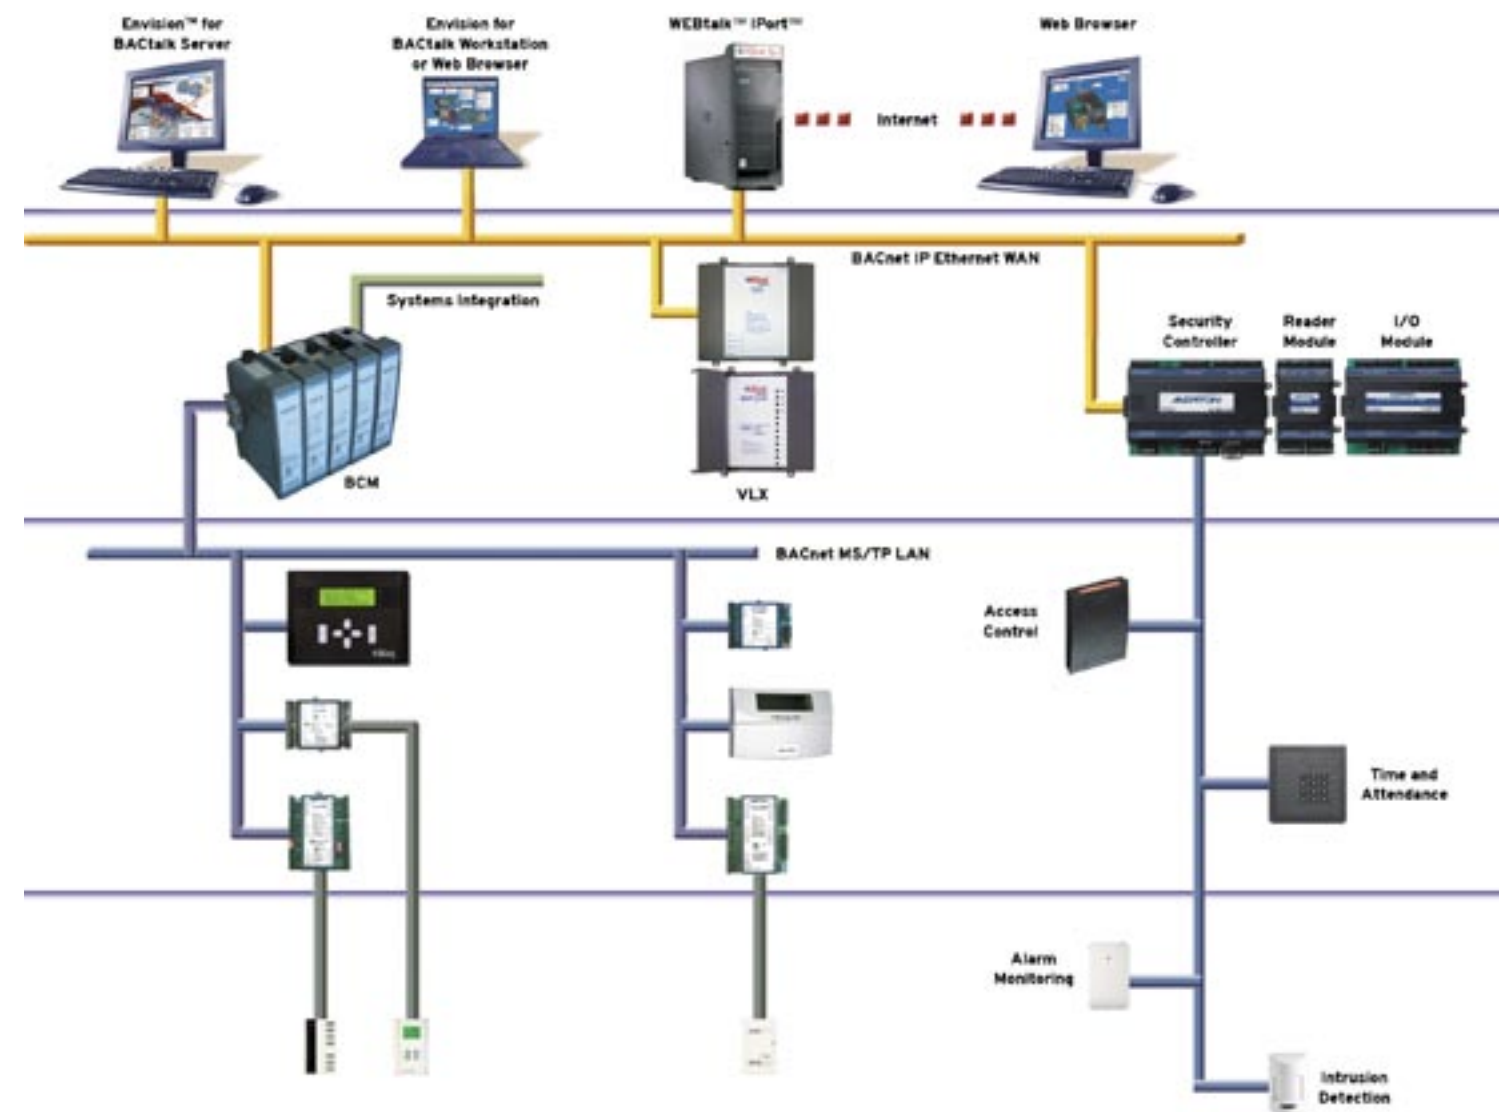

*Alerton BACtalk® Building Security is an integrated, Web-based system that enables real-time management and monitoring of your mid-size facility. Use a Web browser—anytime, anywhere—for access control, time and attendance monitoring, and intrusion detection.*

**BACnet® compliance means seamless integration to your existing system.** Alerton BACtalk Building Security easily integrates with your BACnet building automation system (BAS). The controller supports Web connectivity, which means lower installation and maintenance costs, enhanced system performance, increased operator and enterprise access, and improved flexibility for future system expansion and change.

**Feature-rich flexibility that's easy to use.** Alerton BACtalk Building Security is rich with easy-to-use features and browser-based views of credentials, schedules, alarms and activities. Setup is simple using a series of guided wizards that quickly get your basic protection up and running. Alerton BACtalk Building Security's multiple views are based on each individual user's access rights. View alarms and activities from an intuitive console that enables you to quickly view graphic layouts of your facility and locate points of entry, exit and alarms. A security manager can enter relevant notes to create a permanent record. Actions can be automatically triggered in response to events, and Alerton BACtalk Building Security can track all events and user interactions.

While basic setup is quick and easy, authorized security personnel can also enable more advanced logic such as anti-passback, integration with the building automation system, and custom reporting views.

**The Alerton BACtalk Building Security controller augments a complete Alerton BAS solution.** You can now enjoy one-stop shopping for a complete solution that controls HVAC equipment and other building systems.

## Alerton BACtalk Building Security

### Real Time Monitoring

Access real time alarm and activity monitoring from an intuitive console and quickly view graphical facility layouts to locate points of entry, exit and alarms. Facilitate the operator response to system events with unique alarm point instructions and process events with relevant notes to create a written record of events.

### Comprehensive Reporting

Historical data is easily searchable through a list of predefined reports and comprehensive ad-hoc reporting capabilities. Export results to comma separated value (CSV) format or standard PDF format using flexible report styles to customize report layouts.

# Alerton BACtalk Building Security
